How embracing the ‘Grand Challenges’ creates opportunities for innovation

Reading time 8 mins

Key Points

- The United Nations has identified 17 Sustainable Development Goals that it aims to achieve by 2030, e.g. improved access to healthcare, responsible production, and sustainable cities.
- Meeting these goals highlights ‘grand challenges’: global factors that transcend traditional boundaries, calling on all parties (government, business, and civil society) to fulfil a role.
- Product design requires us to rethink how we conceive, create, and deliver products in areas such as sustainability, inclusive and human-centred design, rapid prototyping, and technology integration.
- Rather than roadblocks, the grand challenges are opportunities for innovation, allowing us to create products that profit both people and the planet. In the past, these opportunities created innovations such as 3D printing (minimising waste, resources, and energy), technologies for people with disabilities (improving accessibility), and environmental monitoring products (real-time data gathering to develop accurate insights).
- Addressing unmet needs will require continued collaboration and an interdisciplinary approach to find solutions, create opportunities, and manifest them.

The neverending quest to develop new products that serve unmet or unforeseen customer needs is an adventure requiring entrepreneurs and businesses to navigate unfamiliar territory and turbulent international waters. Where innovation is the compass, and the user experience is the destination, we often face obstacles and global challenges (e.g. sustainability, accessibility) that determine our course of action moving forward. These are referred to as 'grand challenges' because they're global, transcend traditional boundaries, and invite us to reimagine how we conceive, create, and deliver products to the world.

In our experience, embracing the grand challenges presented by the client or the project scope is always the spark that lights the flame of innovation. From [building an autonomous underwater vehicle](#) to designing [gloves that create music through movement](#), 'challenges' such as sustainable or human-centred design weren't roadblocks. Instead, they were unique opportunities that enabled us to create products the world had never seen. Call us if you'd like us to do the same for you. An expert on our team will fill you in on [how we Innovate on Demand®](#) to find solutions that turn challenges into opportunities.

Where did these global challenges come from?

The [UN's Sustainable Development Goals](#) (SDG) outlined the grand challenges as a part of a call to action to promote prosperity while protecting the planet. The SDG identifies 17 interconnected objectives to achieve by 2030, subdivided into five categories:

1. **Humankind:** Clean water and sanitation, eradicate poverty and hunger, and improve access to healthcare, education, and gender equality
2. **Planet:** Climate action, protection of life on land and life below water
3. **Prosperity:** Affordable and clean energy; sustainable cities and communities; responsible consumption and production; support industry, innovation, and infrastructure; decent work and economic growth.
4. **Peace:** Social justice and strong institutions
5. **Partnership:** Collaborations that ensure the successful attainment of objectives

Meeting these goals by 2030 requires players from all sectors – government, industry, academia, and civil society – to fulfil their role and [design thinking](#) has a leading part to play. Which solutions will have the most significant and positive impact on society or the planet? Which grand challenges can product design address, and how do they present opportunities for innovation?
